Temptative previsional plan I	7
1 Introduction	9
1.1 Plan, vision, etc	9
1.2 Deep learning and history	9
1.3 Regular deep learning	9
1.4 Irregular deep learning	9
1.5 Unstructured deep learning	9
1.6 Propagational point of view	9
2 Presentation of the domain	9
2.1 Typology of data	9
2.2 Standardized terminology	9
2.3 Motivation	9
2.4 Datasets	9
2.5 Unifying framework (tensorial product)	9
2.6 Other Unifying frameworks	9
3 Review of models and propositions	9
3.1 How to compare models	9
3.2 Spectral models	9
3.3 Non-spectral	9
3.4 Non-convolutional	9

3.5	Recap and (big) comparison table	9
3.6	Explaining current SOA, current issues, and further work . . .	9
4	Transposing the problem formulation: Structural learning	9
4.1	Structural Representation	9
4.2	Feature visualization (viz on input)	9
4.3	Propagated Signal visualization (viz on S)	9
4.4	Temptatives on learning S	9
4.5	Temptatives on learning S (other)	9
4.6	Covariance-based convolution	9
4.7	Conclusion	9
5	Industrial applications	9
5.1	Context	9
5.2	The Warp 10 platform and Warpscript language	9
5.3	Presentation of use cases: uni vs multi-variate, spatial vs geo, etc	9
5.4	Review and application on regularly structured (spatial) time series	9
5.5	Application to time series database (unstructured)	9
5.6	Application to geo time series (unstructured)	9
5.7	Application to visualization	9
5.8	Market reality (what clients need, what they don't know that can be done ...)	9
5.9	Conclusion	9
6	Conclusion	9
6.1	Summary	9
6.2	Lesson learned	9
6.3	Further avenues	9

<i>CONTENTS</i>	3
Temptative previsional plan II	9
0 Introduction	11
0.1 Teaser	11
0.2 Motivation	11
0.3 Difficulties	11
0.4 Outline	11
1 Presentation of the subject	11
1.1 Title disambiguation	11
1.2 Deep learning	11
1.3 Signals, features, structure, underlying graph	11
1.4 Regular, Irregular, Unstructured	11
1.5 Goals	11
2 Presentation of the field	11
2.0 (<i>Possibly merged with previous chapter</i>)	11
2.1 Tensors	11
2.2 Neural networks	11
2.3 Graphs	11
3 Neural networks on graphs	11
3.1 From non-structured data to graphs	11
3.2 Types of learning	11
3.3 Propagational abstraction	11
3.4 Dense versus sparse connectivity	11
4 Classification of signals over a graph	11
4.0 (<i>Can be splitted in multiple chapters</i>)	11
4.1 Principles	11
4.2 SotA review	11
4.3 Generalizing the convolution	11

4.4	A convolution based on graph translations	11
4.5	Learning the weight sharing scheme	11
4.6	Learning through the covariance matrix	11
4.7	Discussion	11
5	Classification and representation of nodes and graphs	11
5.0	<i>(Optional chapter) either develop this chapter, or just stress out in 3.2 that it won't be</i>	11
5.1	Semi-supervised learning of nodes	11
5.2	Representation learning of graphs	11
5.3	Supervised learning of graphs	11
5.4	Discussion	11
6	Industrial applications	11
6.1	Context, Warp10, (Geo) Time series	11
6.2	Supervised learning	11
6.3	Semi-supervised learning	11
6.4	Representation learning	11
6.5	Market reality and perspectives	11
7	Conclusion	11
7.1	Summary	11
7.2	Discussion	11
7.3	Further avenues	11

Temptative previsional plan III 11

0 Introduction 13

0.1	Teaser	13
0.2	Motivation	13
0.3	Difficulties	13
0.4	Outline	13

1 Presentation of the field 13

1.1	Tensors	13
1.2	Neural networks	13
1.3	Graphs	13
1.4	Neural networks on graphs	13
1.4.1	Tasks	13
1.4.2	Structures	13
1.4.3	Reusability	13
1.4.4	Approaches	13

2 Classification of signals over a graph 13

2.1	Principles	13
2.1.1	Equivariant functions	13
2.1.2	Partially connected layer	13
2.1.3	About depth	13
2.2	Generalizing the convolution	13
2.3	A convolution based on graph translations	13
2.4	Learning the weight sharing scheme	13
2.5	Other avenues	13
2.6	Discussion	13

3 Classification and representation of nodes and graphs 13

3.0	<i>(Optional chapter) either develop this chapter, or just stress out in 1.4 that it won't be</i>	13
-----	---	----

3.1	Semi-supervised learning of nodes	13
3.2	Representation learning of graphs	13
3.3	Supervised learning of graphs	13
3.4	Discussion	13
4	Industrial applications	13
4.1	Context	13
4.2	Examples	13
4.3	Discussion	13
5	Conclusion	13
5.1	Summary	13
5.2	Discussion	13
5.3	Further avenues	13

<i>CONTENTS</i>	7
Temptative previsional plan IV	13
0 Introduction	15
1 Presentation of the field	15
2 Convolution on graph domains	15
3 Neural networks on graphs	15
4 Industrial applications	15
5 Conclusion	15
